Project Effectiveness Midwives Responses

Interpersonal Growth

Technical Competence

Capacity Development

Empowerment

Professional aspects

Satisfaction

Independency

Continuity

Interpersonal Growth

Self confidents, knowledge & skills improvement, team building, community & colleagues awareness.

“I had no experience in dealing with people in the community or arranging health education sessions. However, I am enjoying doing these tasks now as they trigger my continuous pursue of knowledge and new information”

Technical competence & Capacity development

Rising services utilization

Training/workshops

Exchange experiences/nationally, internationally.

Improve the cadre.

Empowerment

Increase number of midwives.

*More experienced, work independently, self esteem,
expansion of SOP & roles as professionals*

"Now we are more experienced in offering care to women during pregnancy. We can discover the critical cases and differentiate between normal and abnormal presentation of the baby".

"In the beginning we didn't know how to work at clinics and what kind of care we should offer women even though we studied at the university but in the real situations it was difficult for us".

Continuity of care

Unique practice, commitment & interactive relationship

“I feel responsible and concerned to stay with any women from my clinic even if my shift is over”.

Satisfaction

"we sense the effectiveness of our work when we meet the woman at the hospital. This makes us see how the holistic approach and continuity of care practically materialize".
